

Four Anthropic certifications after 13 July and who each is for

Claude Certified Developer, Foundation (CCDV-F) · UST masterclass

EN Session 3 of 12 · English notes

On 6 August 2026 Vijay opened with the certification map. Before **13 July 2026** Anthropic had essentially one credential (he remembered it as a solutions-architect sitting). After that date the programme split into **four** named tracks. This masterclass is the second: **Claude Certified Developer, Foundation (CCDV-F)**. Do not study Architect Professional by accident, and do not treat Percipio as the exam.

The four names (classroom expansions)

ASR in the transcript mangled acronyms (CCAOF, “CCDB”). Use Anthropic’s live names on Skilljar. Pedagogically Vijay grouped them as: business-oriented Associate Foundation, developer Foundation, Architect Foundation, Architect Professional.

Track (as taught)	Who it is for	Skills he listed	Exam sketch (classroom)
Associate / business Foundation	Consultants, sales engineers, customer success, delivery managers, business analysts — <i>non-developers</i>	Prompting, Claude projects, choosing models, responsible AI, knowledge management, output evaluation — mainly Chat and Cowork	60 questions, 120 minutes, ~USD 99, 12-month validity
Developer Foundation (this course)	Software developers, AI engineers, backend, full-stack	Claude APIs, prompting, structured outputs, Claude Code , MCP, light Agent SDK and error handling	60 questions, 120 minutes, ~USD 125, 12-month validity
Architect Foundation	Solution / AI architects, technical leads, platform engineers — needs enterprise build judgement	Agentic architecture, Claude Code, MCP, prompting, context management, system design, production reliability	Same family of sitting; confirm current price/length on Skilljar
Architect Professional	Enterprise / principal architects, technical directors, AI platform leads	Enterprise AI architecture, governance, security, compliance, scalability, operational excellence	Highest bar; same 13 July programme family

PRICES AND CODES MOVE

USD 99 / 125, 60×120, 12-month validity, and 750/1000 pass came from Vijay’s slides and a ~14-page July 2026 programme PDF. Trust anthropic.skilljar.com on booking day.

Recommended learning spine for developers

Regardless of track, he wanted everyone fluent in: how Chat, Cowork, and Code sit on the models; **prompt engineering (~18–20% of items on all certs)**; Claude projects (local, git, remote); Claude API (knowledge, tools); Claude Code as the coding agent; MCP; Agent SDK (memory, tool loops); then architecture for those who sit the architect papers. Official sample: overnight 10,000 documents, cost-first, not urgent → prefer **Message Batches** (async, up to a 24-hour window in the stem) over firing synchronous Messages in parallel “to finish ASAP.”

How you sit it

- No cohort exam date — you book a slot (Pearson in the stories; org may add a vendor).
- Academy courses teach jargon; they are not the proctored exam (and, if UST is already a partner, course completion is no longer the only gate he described).
- Percipio completion $\neq$ Anthropic certified.
- He promised to push the programme PDF and samples to a GitHub repo for the class—use whatever facilitation actually shares, plus docs.claude.com.

What this four-week class will and will not finish

Coverage is developer Foundation: APIs, Code, MCP, prompting, a taste of Agent SDK. Agentic architecture and production reliability appear so you can see the architect tracks, not because CCDV-F requires professional-level governance essays. Associate-only Cowork fluency is already behind you if you followed modules 01–02; do not skip Code because “I am a BA on this call.”

Prompting resources he endorsed

For prompt-engineering technique (zero-shot, few-shot, chain of thought) he pointed at a general (not Claude-only) techniques site in chat, plus Anthropic’s own docs. Exam items still use Claude product names. Learn both: the pattern, then the Claude control (stop sequences, structured output) that later modules teach.

Capstone reminder

Team capstone may exist; it is not Pearson. Do not upload client code to a shared demo repo. The certification tests judgement on Anthropic’s stack.

Official documentation

- **Anthropic Academy (Skilljar)**
<https://anthropic.skilljar.com>
 Live track names, booking, and course lists.
- **Messages API**
<https://docs.claude.com/en/api/messages>
 Named in the sample batches-versus-parallel item.
- **Prompt engineering overview**
<https://docs.claude.com/en/docs/build-with-claude/prompt-engineering/overview>
 Largest shared slice across the four papers.
- **Claude Code overview**
<https://code.claude.com/docs/en/overview>
 Centre of the developer Foundation skill list.
- **MCP**
<https://docs.claude.com/en/docs/agents-and-tools/mcp>

On both developer and architect skill lists.

Study notes distilled from the UST CCD Foundation masterclass. Prefer Anthropic's current docs over session anecdotes. Not official exam material.
