

Programme, trainer, and how the four weeks are structured

Claude Certified Developer, Foundation (CCDV-F) · UST masterclass

EN Session 1 of 12 · English notes

On 3 August 2026 Vijay opened the four-week **Claude Certified Developer, Foundation (CCDV-F)** masterclass for UST. Roughly 300 people were on the call. This is not a generic “intro to AI” day: the cohort is being prepared to *use Claude as developers*—both people who ship full-stack applications and people who build AI applications (chatbots, agents, autonomous workflows).

Who is in the room and how to ask questions

Vijay is the trainer for the next four weeks. Facilitation (Shiny and later HR L&D) owns logistics, mute, and recordings. Questions belong in chat; Vijay takes a dedicated block of about 15 minutes at the end. Raise a hand if something is blocking the live demo. Do not paste confidential UST or client data into any Claude surface, including demo accounts.

CLASSROOM RULE FROM DAY ONE

Treat every prompt as if it could leave the organisation. Later sessions repeat do’s and don’ts (PII, PCI, GDPR, connectors). Session 1 already starts that rule: no client secrets in Chat, Cowork, or Claude Code.

Two developer roles this course serves

Vijay split the audience so the same product family maps onto two jobs. Keep both in mind when you study: the exam scenarios often ask *which surface and which pattern* you would pick for a given role.

Role	Typical work	How Claude is meant to help
Application developer	Full-stack, embedded, mobile, IoT, any conventional SDLC	Faster, more consistent implementation: generate code, tests, Postman collections, debug, DevSecOps artefacts
AI application developer	Chatbots, agents, autonomous systems	SDKs, tool use, MCP, RAG, agent patterns and frameworks to <i>build</i> AI into the product

Everything in the masterclass revolves around those two uses. You are not expected to train foundation models. You are expected to infer well: prompts, context, tools, and product choice.

Three workstreams across the four weeks

Vijay described the programme as three stacked workstreams, not twelve disconnected demos. Week 1 (this session and the next) stays on products and concepts. From day three the room moves into agents and then into coding.

- Cowork and Chat first.** General-purpose and local workspace use: what Anthropic ships as Claude Chat / Claude.ai and Claude Cowork, who they are for, and how they sit on top of the models.

2. **Then application development with Claude Code.** How developers apply the same concepts inside a repo, terminal, and IDE.
3. **Then agents, workflows, and agentic architecture.** Building agents, integrating them into existing full-stack apps, SDLC acceleration (requirements, design, configuration management), evaluation of generated code, tests, debugging, model selection, SDKs, prompt and context engineering, guardrails, Claude hooks, tools, and MCP for proprietary data.

What “Foundation” actually covers in class

The live agenda is the **developer Foundation** track. Later weeks still mention architect topics (agentic architecture, production reliability) so you can see the map, but this cohort’s exam target is CCDV-F: APIs, prompting, structured output, Claude Code, MCP, and a light pass on Agent SDK and error handling.

- Week 1 in the recordings: Claude as a product family, Chat, Cowork, certification landscape, exam format.
- Following weeks: Claude Code, Anthropic APIs/SDK, prompt engineering, tools/MCP, RAG, agents, guardrails, exam prep.
- Recordings and slide PDFs were promised via the cohort LMS / shared folder. Ask facilitation if a file is missing.

How to use these notes

Each chapter is distilled from the trainer’s teaching, not a chat log. Hellos, mute, and screen-share troubleshooting are omitted. Product names stay in English: Claude, Cowork, Claude Code, MCP, RAG, Skilljar. When a UI label, model name, or partner-tier number from August 2026 is already stale, **trust current Anthropic documentation** over the recording.

LIVE CLASS UI DRIFTS

Desktop version numbers, Cowork availability, model pickers (Haiku / Sonnet / Opus / and names that appeared in class such as Fable), and Skilljar course counts change. Prefer docs.claude.com and anthropic.skilljar.com on exam week.

Primary products you will keep hearing

Session 1 already named the family. Later chapters expand each surface. For orientation, Vijay’s training emphasis is Claude Code plus the Claude API; Chat and Cowork are the on-ramp.

Product	Trainer’s one-line purpose	When it appears in this programme
Claude Chat (Claude.ai / web and desktop Chat)	Conversational assistant for questions, writing, analysis	Module 01 demo; still used for prompting practice
Claude Cowork	Agentic local workspace: folders, multi-step tasks, schedule/trigger	End of session 1 and all of session 2
Claude Code	Agentic coding from terminal, IDE, and desktop	

Product	Trainer's one-line purpose	When it appears in this programme
		From session 3 onward — exam core for developers
Claude API / platform	Any of your applications calling models	SDK weeks; Messages API on the exam

He also mentioned Claude in Chrome, Excel, PowerPoint / Microsoft 365, and Claude for Slack (“Claude Tag” in the transcript). Those are real product surfaces, but they are not the spine of CCDV-F.

Official documentation

- **Claude Docs home**

<https://docs.claude.com/en/home>

Canonical start for API, prompting, tools, and product docs. Use this when the classroom UI has moved.

- **Anthropic Academy (Skilljar)**

<https://anthropic.skilljar.com>

Self-paced courses and the portal Vijay used for partner / exam enrolment discussion.

- **Claude Code documentation**

<https://code.claude.com/docs/en/overview>

Terminal and IDE agent; primary developer surface from session 3.

- **Models overview**

<https://docs.claude.com/en/docs/about-claude/models>

Check live model names and context windows before the exam.

Study notes distilled from the UST CCD Foundation masterclass. Prefer Anthropic's current docs over session anecdotes. Not official exam material.
